as a very pleased subscriber to xm satellite radio I am displeased with the national association of broadcasters attempt to limit or stifle the excellent services provided. Not only does it provide a seemingly endless variety of music, the news, weather, traffic reports and talk shows provide exceptional and timely information to its subscribers. The nab and petition 04-160 are trying to limit satellite radio to the less than desirable services to the public provided by the am and fm bands. With respect for an emerging technology, freedom of speech, and the american people, I request your decision to reject petition 04-160. Thank you Paul Mchargue
